WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

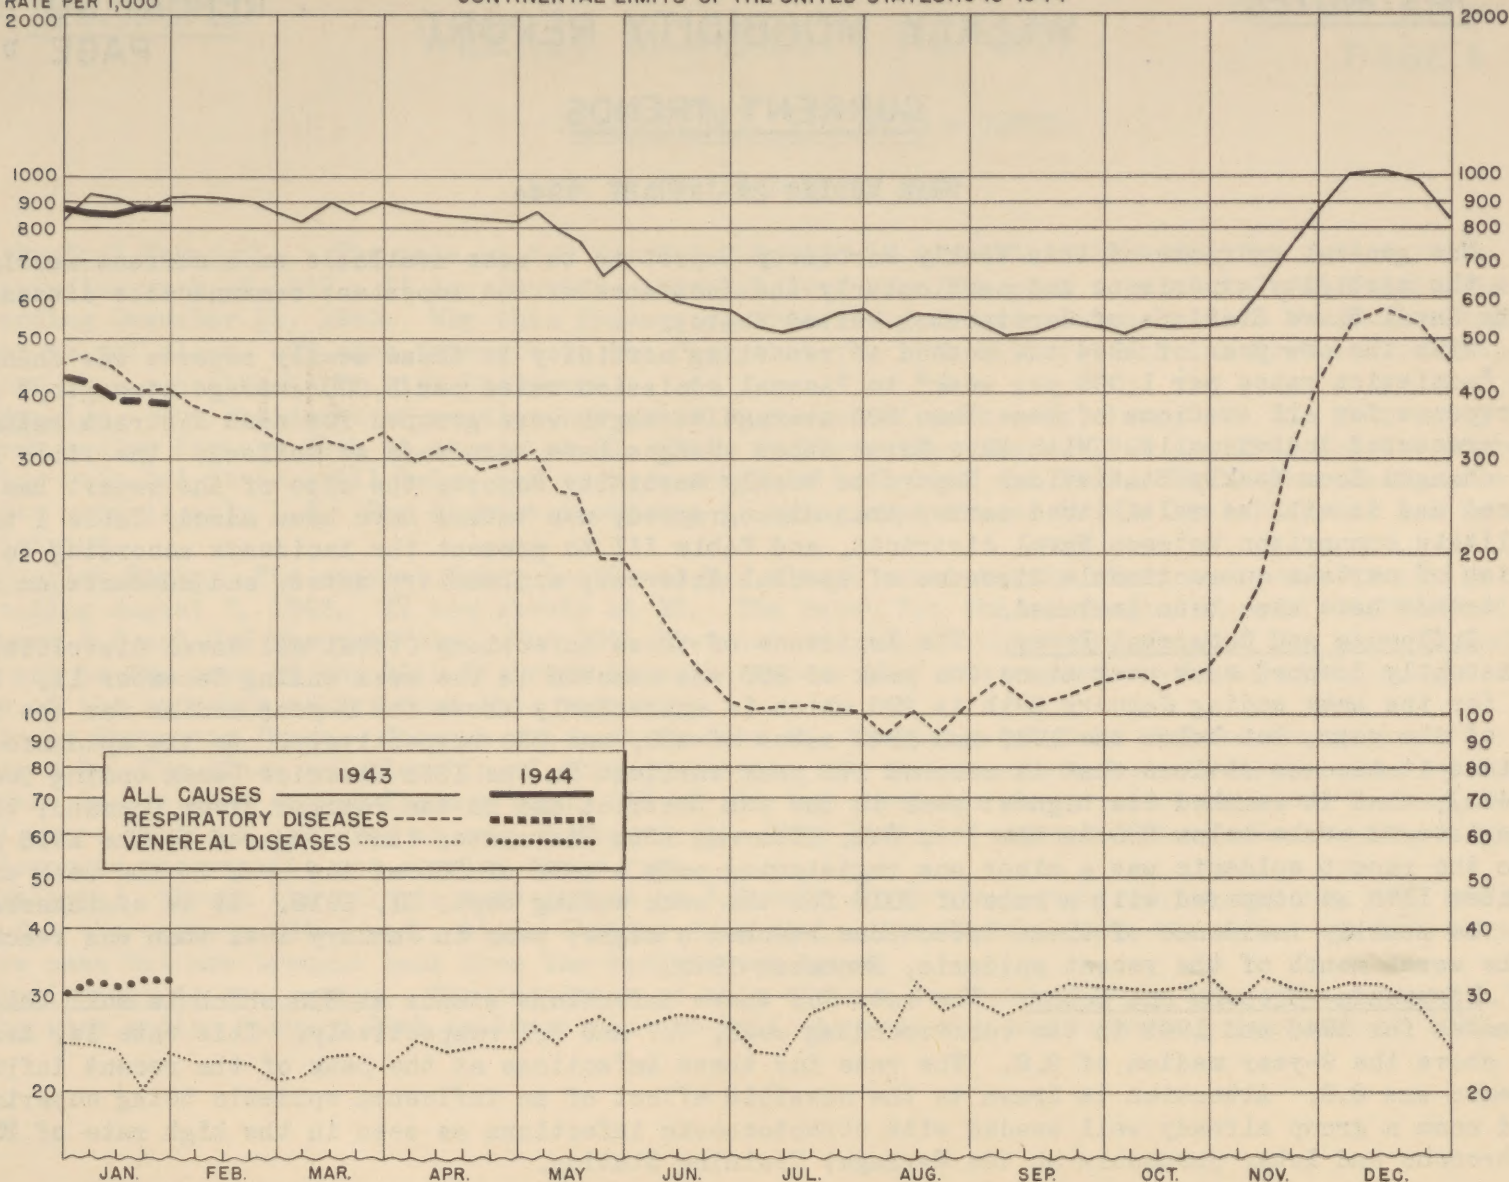

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

CURRENT TRENDS

WEEK ENDING 29 JANUARY 1944

The general purpose of this Weekly Morbidity Report is to make available on a current weekly basis the morbidity experience and particularly the incidence of the important communicable diseases in the Naval Shore Stations of Continental United States.

With the new year of 1944 the method of reporting morbidity in these weekly reports was changed from "admission rates per 1,000 per week" to "annual admission rates per 1,000 average strength," and the reports for all stations of less than 500 average strength were grouped for each District rather than presented individually. With this issue other changes have been made as follows: the title has been changed from Weekly Statistical Report to Weekly Morbidity Report; the size of the report has been reduced and it will be multilithed rather than mimeographed; new tables have been added, Table I to facilitate comparison between Naval districts, and Table III to present the incidence according to station of certain quarantinable diseases of special interest; explanatory notes, and comments on current trends have also been included.

Influenza and Catarrhal Fever. The incidence of these infections (total all Naval districts) has persistently dropped each week since the peak of 555 was reached in the week ending December 11. The rate for the week ending January 29th is 290 which is appreciably above the 9-year median for the 5th week of the year, but below the 1943 and 1942 rates of 400, and 350 respectively. As the epidemic subsides it becomes obvious that it reached its peak earliest in the 13th District (week ending December 4th); that it reached its highest peak in the 9th District and in the Potomac River Command; that it registered peaks below 500 in the 7th, 8th, 11th and 12th Districts; that compared to the 1918 pandemic the recent epidemic was a minor one registering only a rate of 555 at its peak in the week ending December 11th as compared with a rate of 3015 for the week ending Sept. 21, 1918. It is of interest that the monthly incidence of these infections reached a higher peak in January 1941 than was reached in the worst month of the recent epidemic, December 1943.

Pneumonia--Broncho and Lobar. The rate for these infections stands at 6.0 which is well below the rates for 1943 and 1942 in the corresponding week, 7.7 and 9.1 respectively. This rate is, however, well above the 9-year median of 2.9. The rate for these infections at the peak of the recent influenza epidemic was 8.0. Attention is drawn to the possible effect of an influenza epidemic being superimposed upon a group already well seeded with streptococcic infections as seen in the high rate of 30 for broncho and lobar pneumonia at the Farragut Training Station.

CURRENT TRENDS --CONTD.

WEEK ENDING 29 JANUARY 1944

Atypical Pneumonia. The rate of 5.0 for this disease is approximately twice the rate for the corresponding week of 1943. It is, however, somewhat less than the peak rate of 7.2 reached in the week ending December 11, 1943. Why this disease reached its peak synchronously with the influenzal infection is not clear. Of some interest is the fact that the 11th District and the Southern California stations show a particularly high incidence.

Measles. The incidence of measles has steadily increased each week since Oct. 23, 1943 until for the week ending January 29th it stands at 20. This is above the rate of 1942 and 1943 for the corresponding week but it is still below the peaks reached in both 1942 and 1943. The 9-year median for this 5th week is only 1.8. The highest incidence is being experienced in the 13th District and in the 9th District.

Scarlet Fever. The scarlet fever incidence has almost consistently risen each week since the week ending August 7, 1943. It now stands at 20. The rates for the corresponding week of 1943 and 1942 were 5.6 and 2.6 respectively. The 13th District and 9th District are showing the highest incidence and in the case of the 13th District it would appear that the summer months of 1943 brought very little of the expected relief from this infection.

Acute Rheumatic Fever. Through the past 7 weeks the incidence of this disease has risen from 3.12 to 5.0. The close relationship of this disease to the streptococcic infections is shown by the fact that in the week ending January 22nd, 22% of all the rheumatic fever cases reported for all Continental shore stations occurred at one station in the 13th District which had been experiencing a high streptococcus pharyngitis and scarlet fever rate.

Malaria. Though the malaria rate stands at 5.0 well above the 9-year median and the 1943 and 1942 rates for the corresponding week, it is obvious from their distribution that the cases are not autochthonous ones but are brought back from the various war zones.

Meningococcic Meningitis. The incidence of this disease is comparatively low. The rate of 0.77 for the week ending January 29th is less than one-half the rate for the corresponding week of 1943.
